Naveed Ul Aziz

CTO | Digital Transformation Consultant and Strategist

Email: **naveedulaziz@gmail.com**| Phone **+923056801009**

A visionary Chief Technology Officer and Digital Transformation Strategist, with a robust background spanning over twelve years in steering innovative software solutions, orchestrating digital strategy, and leading technology teams to deliver exceptional results. Having championed the digital transformation initiatives at InvoZone, Naveed has not only reshaped the technology landscape of the company but also significantly contributed to its position as a global leader in software solutions.

Naveed's expertise lies in identifying and deploying cutting-edge technologies to solve complex business challenges, optimize operational efficiency, and drive sustained growth. With a deep-rooted passion for technology and innovation, he has a proven track record of developing high-calibre teams, fostering a culture of excellence, and orchestrating the seamless integration of technology into business processes to unlock new avenues of value creation.

A strategic thinker and an adept problem-solver, Naveed's approach is characterized by a unique blend of technical prowess and business acumen. His extensive experience encompasses a wide range of technologies including Elixir, MERN/MEAN Stack, React Native, and Blockchain, positioning him as a leader not just in software development but also in shaping the future of digital business strategies.

Now seeking new challenges where he can leverage his rich tapestry of technical knowledge, leadership, and strategic insights to drive digital innovation, transform business models, and create competitive advantages for forward-thinking organizations.

Key Achievements

- Digital Transformation Leadership: Spearheaded the digital overhaul at InvoZone, leading to an 85% increase in operational efficiency and a 35% reduction in time-to-market for new products.
- Product Development and Management: Directed the development and launch of over 20+ successful software products and 250+ software projects, consistently meeting the dynamic needs of global clients across industries.
- Team Leadership and Development: Built and mentored a high-performing team of 500+ tech professionals, fostering a culture of innovation, continuous learning, and excellence.
- Strategic Partnerships and Growth: Played a pivotal role in forging strategic partnerships, expanding the client portfolio by 40%, and significantly boosting the company's market presence and revenue.

Key Skills

Programming Languages

- HTML, CSS, JavaScript, PHP, Python, Elixir, Solidity etc

Full-Stack Capabilities

Education

Bachelor of Science in Computer Science - BSCS

Lahore Garrison University

CGPA: 3.88/4.00

Other Skills

- Strategic Technology Planning Development and Execution, Digital Transformation Leadership, Technology Innovation, Project Management, Solution Architecture, Team Leadership and Development, Problem-Solving and Decision-Making
- Management tools: Trello, Asana, Jira, Monday, Azure board, Notion, LucidChart
- Frameworks/Libraries: Phoenix, LAMP, MEAN, MEVN, MERN, PERN, Redux, Flux, Context, Material-UI, Semantic-UI, Ant-Design, Bootstrap, Tailwind, etc
- Frontend-web: Markdown, HTML, CSS, JQuery, Next, React.Js, Angular, VueJs
- Frontend-mobile: React-Native, Ionic
- Frontend-desktop: ElectronJs
- Backend: NodeJs, PHP-Core, Laravel, Django, Golang, Ruby on Rails,
- Web3: Blockchain, Smart Contracts, NFTs, DAOs, DeFis
- Strong leadership skills
- The ability to think strategically and develop long-term plans
- Experience in leading organizational change, managing resistance, and facilitating the adoption
- Strong interpersonal and collaboration skills
- Keeping up-to-date with emerging technologies and industry trends
- Excellent verbal and written communication skills

Career Highlights

CTO | Entrepreneur | Digital Transformation Consultant and Strategist | Certified IT Ninja | Technical Project Manager

Consultation - On-demand | Mar 29, 2024 - Present

- Spearheading the development and execution of transformative technology strategies that drive business growth and foster innovation aligned with my client's business objectives and vision.
- Advising and Empowering organizations to unlock their full potential through strategic digital technologies initiatives, elevating innovation, operational efficiency, and revolutionizing customer experiences and user experiences.
- Researching, evaluating, and recommending new technologies to clients to enhance their competitive advantage and address their specific needs.
- Collaborating closely with clients to architect, orchestrate, develop and deploy bespoke technology solutions that seamlessly align with their unique business's strategic goals and objectives.
- Orchestrating the seamless design and implementation of agile technology solutions, delivering tangible results within accelerated timelines and budgetary constraints.
- Managing project budgets, resources, timelines, and deliverables effectively to ensure successful project outcomes within scope and budget.

- Providing guidance on cybersecurity best practices, ensuring data protection, and ensuring compliance with industry regulations and standards.
- Leading cross-functional teams, providing mentorship and guidance to team members, and fostering a culture of innovation and continuous learning.
- Harnessing creativity and strategic acumen to anticipate and mitigate challenges, transforming obstacles into opportunities for client success and organizational advancement by sharing insights, trends, and best practices in IT through thought leadership articles, speaking engagements, and industry events.
- Building and maintaining strong relationships with my clients, understanding their evolving needs, and delivering exceptional service and value.

CarClick.se

Chief Technology Officer
Freelance: Mar 30, 2024-Present
Sweden-Remote

Project Description: CarClick is a cutting-edge vehicle buying and selling SaaS platform designed to revolutionize the way individuals and dealerships engage in car transactions. The project addressed the problem of inefficient and fragmented car buying and selling processes, which often led to poor user experiences and lost opportunities for sellers.

To solve this, I spearheaded the development of a seamless, user-friendly platform that integrates advanced search functionalities, real-time market analytics, and secure transaction processes. Utilizing a robust tech stack including NodeJS, Express, NextJS, ReactJS, Redux, Material-UI, Webflow, HTML, CSS, JavaScript, and TypeScript, the platform ensures a high-performance, scalable solution that meets the demands of modern users. PostgreSQL is used as a database for the CRM and MySQL is used as a database for the Platform itself.

We also leveraged tools such as Postman for API

WanderWord.net

Chief Technology Officer
Freelance: Mar 30, 2024-Present
Sweden-Remote

Project Description: WanderWord is an innovative platform dedicated to creating top-notch, user-friendly, and intuitive tools like Fabella Creator, which empower users to craft interactive audio stories. The project tackled the challenge of limited tools available for interactive audio content creation, which often resulted in complex and cumbersome user experiences.

To address this, I led the development of a sophisticated platform that simplifies the creation process while offering powerful features for advanced users. By utilizing a comprehensive tech stack that includes .NET, React, WordPress, HTML, CSS, JavaScript, TypeScript, Python, and various third-party APIs, the platform delivers a seamless and efficient user experience.

We also integrated tools such as GitHub for version control, Slack for team collaboration, AWS for scalable infrastructure, MySQL for database management, PHP for server-side scripting, and

testing, Figma for design, Spyne for image enhancement, Loopia and simply.com for domain services, cronjob for scheduling, Hubspot for CRM integration, Webflow for frontend design, Google Analytics for user behavior tracking, AWS S3 for storage solutions, and DigitalOcean for hosting. Unit Testing and Code Reviews were conducted throughout the development process to ensure a high-quality product. MongoDB was integrated for advanced data management and Redis for caching. Angular was utilized for specific UI components, while Bootstrap enhanced the platform's responsiveness.

What was the outcome of the project? The outcome of CarClick was highly successful. The platform significantly streamlined the car buying and selling process, resulting in a 40% increase in user engagement and a 25% reduction in transaction times. Dealerships reported a 30% increase in sales efficiency, and customer satisfaction ratings soared by 50%. The platform's intuitive design and powerful features have made it a leading solution in the automotive marketplace.

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** NextJS, ReactJS, Redux, Material-UI, Webflow, JavaScript, TypeScript, HTML, CSS, Angular, Bootstrap
- **Database:** PostgreSQL, MySQL, MongoDB, Redis
- **Tools and Services:** Postman, Figma, Spyne, Loopia, simply.com, cronjob, Hubspot, Webflow, Google Analytics, AWS

Swagger for API documentation. Automation Testing was implemented using Jest and Mocha to ensure a bug-free user experience. Vue.js was employed for specific interactive components, while Cyber Security protocols were integrated to safeguard user data. Unit Testing and Code Reviews were conducted throughout the development process to ensure a high-quality product. Web3, Solidity and Artificial Intelligence (AI) were explored for potential future integrations of Blockchain involving decentralized audio distribution.

What was the outcome of the project? The outcome of WanderWord has been highly positive. The platform successfully simplified the process of creating interactive audio stories, resulting in a highly praised user experience. Users appreciated the intuitive interface and the powerful features, which made it easier for both novice and experienced creators to develop and publish their audio stories. The positive feedback and growing user base demonstrate the platform's success in addressing the needs of its target audience.

Tech Stacks:

- **Backend:** .NET, PHP, Python
- **Frontend:** React, WordPress, JavaScript, TypeScript, HTML, CSS, Vue.js
- **Database:** MySQL, Redis
- **Tools and Services:** GitHub, Slack, AWS, Swagger
- **Other Technologies:** Unit Testing, Code Reviews, Automation Testing, Cyber Security, Web3, Solidity, AI, Blockchain

S3, DigitalOcean

- **Other Technologies:** Unit Testing, Code Reviews, 3rd party APIs, cronjob

CTO & Head Of Digital Transformation at InvoZone

Full-time - Hybrid | Apr 29, 2019 - Mar 29, 2024

- Developing and implementing the organization's overall technology strategy and vision.
- Leading the research, evaluation, and adoption of new technologies to drive innovation and improve efficiency.
- Collaborating with other executives and departments to align technology initiatives with business goals and objectives.
- Overseeing the design, development, and implementation of technology solutions that meet the organization's needs.
- Managing the technology budget and resources, including vendor relationships and contract negotiations.
- Ensuring the security and integrity of the organization's technology infrastructure, systems, and data.
- Identifying and mitigating technology-related risks and ensuring compliance with relevant regulations and standards.
- Leading and developing a high-performing technology team, including hiring, training, and performance management.
- Keeping current with industry trends, emerging technologies, and best practices, and advising the organization on their potential impact.
- Acting as a technology evangelist and representing the organization in industry events, conferences, and partnerships.

Project Highlights

Frayt.com

Chief Technology Officer
InvoZone: Feb 08, 2023- Mar 29, 2024
US-Remote

Project Description: Frayt is an on-demand delivery platform designed to empower businesses to offer scheduled delivery services to their customers with unparalleled efficiency. The project addressed the issue of unreliable delivery processes that hindered operational efficiency and

Diagnosticum.eu

Chief Technology Officer
InvoZone Jun 20, 2023- Sep 29, 2023
Germany-Remote

Project Description: Diagnosticum is a healthcare platform specializing in laboratory medicine, microbiology, pathology, and human genetics. The project aimed to digitalize patient data management and streamline diagnostic processes.

customer satisfaction. To resolve this, I spearheaded the development of a comprehensive platform integrating real-time tracking, automated scheduling, and seamless communication between businesses and delivery drivers. Leveraging a robust tech stack, including Elixir, Erlang, Java (for Android) Swift (for iOS), React-Native, NodeJS, Express, Heroku, and Firebase, the platform delivers a scalable and high-performance solution tailored to the logistics industry's demands. We incorporated tools such as AWS for hosting and infrastructure, MySQL for database management, Jira for project tracking, WebFlow for frontend design, Intercom for customer support, Stripe for secure payments, and GitHub for version control.

What was the outcome of the project? The Frayt platform achieved a 30% increase in delivery efficiency and a 20% reduction in operational costs. Customer satisfaction improved markedly due to the enhanced service reliability and real-time updates. The platform's intuitive design and powerful features established it as a reliable choice for businesses seeking to streamline their delivery operations.

Tech Stacks:

- **Backend:** Elixir, Erlang, NodeJS, Express,
- **Frontend:** WebFlow, React, Redux, React-Native, Swift (iOS), Java (Android), JavaScript, HTML, CSS, Angular
- **Database:** MySQL, PostgreSQL
- **Tools and Services:** AWS, Jira, WebFlow, Intercom, Stripe, GitHub, Firebase, Heroku
- **Other Technologies:** Unit Testing, CI/CD,

To address this, I led the development of a robust HIPAA-compliant platform that integrates patient management systems with diagnostic tools, enhancing the efficiency and accuracy of medical diagnostics. The backend was built using PHP and NodeJS, with WordPress and React for the frontend. PostgreSQL was used as the database to manage extensive patient data securely.

We utilized tools like GitHub for version control, AWS for hosting and scalable infrastructure, Jira for project management, and Google Analytics for user behavior tracking. Automation Testing was conducted using Cypress, and Redis was implemented for efficient session management. Cyber Security measures were integrated throughout the development cycle to ensure compliance with healthcare standards.

What was the outcome of the project? The platform enhanced diagnostic accuracy by 30% and reduced the time required for patient data management by 40%. It also improved data security and compliance with healthcare regulations.

Tech Stacks:

- **Backend:** PHP, WordPress, NodeJS
- **Frontend:** React, WordPress, HTML, CSS, JavaScript, Vue.js
- **Database:** MySQL, Redis
- **Tools and Services:** GitHub, AWS, Jira, Google Analytics
- **Other Technologies:** Data Sciences, Automation Testing, Cyber Security

LAMP, GraphQL, Data Sciences,, Stripe

Concise.Academy

Chief Technology Officer
InvoZone Oct 18, 2022 - Nov 30, 2023
Turkey-Remote

Project Description: ConciseAcademy is a digital exam preparation tool that helps medical students prepare effectively with comprehensive resources and assessments. The project aimed to provide an all-in-one solution for medical exam preparations, including interactive learning modules, mock tests, and personalized study plans.

To address this, I led the development of a platform with a robust backend using NodeJS and a dynamic frontend using React and Vue.js. The platform offers a seamless experience with real-time updates and interactive content, ensuring effective learning outcomes. PostgreSQL and MongoDB were used to handle complex data structures efficiently.

We integrated AWS for cloud services, GitHub for version control, and Jira for project management. Bitbucket was used for CI/CD, ensuring smooth deployments. Vue.js was used for interactive quizzes, while GraphQL was integrated to manage data efficiently. Automation Testing was conducted to ensure all features were functioning as intended, and Redis was used for caching data.

What was the outcome of the project? The platform was well-received by students and educators alike, resulting in a 50% increase in user engagement and a significant improvement in student performance in mock tests. The intuitive

DreamDJ.com

Chief Technology Officer
InvoZone Sep 01, 2022 - Jun 13, 2023
US- Remote

Project Description: DreamDJ is a comprehensive platform designed to connect users with live performers for events. The project aimed to simplify the booking process for live performers while providing a seamless experience for both performers and event organizers.

To achieve this, I developed a platform that integrates performer portfolios, booking management, and payment gateways. The backend was built using Python and Django, with MongoDB as the primary database for managing complex data structures. The frontend was crafted using React, with custom components developed in Vue.js to enhance interactivity.

We utilized AWS for scalable infrastructure, GitHub for version control, and Slack for team collaboration. Wix was used for certain static content pages, and Lodash was employed for efficient data manipulation. Angular was used for specific administrative features, and GraphQL was integrated to facilitate smooth data querying. Automation Testing was conducted using Jest and Cypress, while Redis was used for session management and caching.

What was the outcome of the project? The platform received positive feedback from users, resulting in a 40% increase in bookings within the

interface and personalized learning paths contributed to its popularity.

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** Vue.js, React, WordPress, JavaScript, TypeScript, HTML, CSS
- **Database:** MySQL, MongoDB, Redis
- **Tools and Services:** AWS, GitHub, Jira, GitLab, Bitbucket, CI/CD
- **Other Technologies:** Vue.js, GraphQL, Automation Testing, Redis

FowardProtocol.io

Assistant Chief Technology Officer
InvoZone Mar 14, 2022 - Dec 16, 2022
US- Remote

Project Description: ForwardProtocol is an innovative platform that allows users to create blockchains, subnets, and decentralized applications (dApps) using a no-code interface. The project aimed to simplify blockchain development for non-technical users and provide a scalable solution for businesses looking to leverage decentralized technologies.

I spearheaded the integration of blockchain protocols using React and NodeJS for the frontend and backend respectively, ensuring a seamless user experience. We leveraged Python for data analytics and Erlang and Elixir for real-time data handling. Smart contracts were developed using Solidity, and various blockchain APIs were integrated to support first six months of launch. The streamlined booking process and performer portfolio features were particularly praised, contributing to an ample rise in user engagement.

Tech Stacks:

- **Backend:** Python, Django
- **Frontend:** React, Vue.js, JavaScript, HTML, CSS, Angular
- **Database:** MongoDB, Redis
- **Tools and Services:** AWS, GitHub, Slack, Wix, Lodash
- **Other Technologies:** GraphQL, Automation Testing, Jest

FarmTest.ag

Assistant Chief Technology Officer
InvoZone Mar 08, 2022- Aug 31, 2022
US- Remote

Project Description: FarmTest is an on-farm performance automation testing platform aimed at optimizing agricultural processes and ensuring data accuracy in farm management systems. The project was designed to automate data collection and provide actionable insights for farmers.

I led the development of a robust platform using NodeJS and React for the backend and frontend respectively. The platform utilized Data Sciences and Jupyter Notebooks for data analysis and visualization. Google Cloud was integrated for storage and compute resources, while Flask served as the primary microservices framework. MongoDB was used for storing complex data sets.

multiple protocols.

We employed AWS for hosting, Confluence for documentation, and LucidCharts for diagramming workflows. Automation Testing was performed using Jest and Mocha, and a comprehensive CI/CD pipeline was set up using Jenkins. Vue.js was used for the administrative dashboards, while Redis was implemented for caching. Web3.js facilitated interaction with Ethereum-based smart contracts.

What was the outcome of the project? The platform empowered non-technical users to create and deploy dApps, resulting in a 50% increase in platform adoption and a noteworthy rise in user engagement. Businesses were able to streamline their operations using the no-code interface, significantly reducing development costs.

Tech Stacks:

- **Backend:** NodeJS, Elixir, Erlang, Python
- **Frontend:** React, Vue.js, JavaScript, HTML, CSS
- **Database:** MongoDB, Redis
- **Tools and Services:** AWS, Confluence, LucidCharts, Jenkins
- **Other Technologies:** Web3.js, Blockchain, Smart Contracts, Solidity, CI/CD, Jest

Ed-Admin.com

Chief Technology Officer
InvoZone Jan 05, 2022 - Jul 14, 2023
Germany-Remote

Project Description: EdAdmin is a comprehensive Learning Management System (LMS) designed to

We also integrated GitHub for version control, AWS for additional cloud services, and Jira for project management. GraphQL was used to facilitate efficient data querying, and Redis was implemented for session management. Automation Testing was conducted using Cypress, ensuring high data integrity and reliability.

What was the outcome of the project? The platform significantly improved data collection accuracy and reduced manual data entry efforts by 60%. It is aimed to provide farmers with actionable insights, leading to a 40% increase in crop yield and a 30% reduction in resource utilization.

Tech Stacks:

- **Backend:** NodeJS, Python, Flask
- **Frontend:** React, JavaScript, HTML, CSS
- **Database:** MongoDB, Redis
- **Tools and Services:** AWS, Google Cloud, GitHub, Jira, Jupyter Notebooks
- **Other Technologies:** Data Sciences, GraphQL, Automation Testing, Redis

BioSensor

Assistant Chief Technology Officer
InvoZone Feb 02, 2021 - Jan 28, 2022
US- Remote

Project Description: BioSensor is a bio lab-related system that collects and displays real-time data for

streamline educational processes for institutions. The project aimed to provide a centralized platform for managing courses, assessments, and student data.

To address this, I developed a robust LMS using NodeJS for the backend and React for the frontend, ensuring high performance and scalability. Oracle served as the primary database, supporting complex data structures and analytics. GitLab was used for version control, and CI/CD pipelines were implemented for seamless deployment.

We also integrated AWS for cloud services, OpenVPN for secure remote access, and BuildPipeline for automated testing and deployment. Automation Testing was conducted using Jest and Cypress, while Redis was used for efficient session management. GraphQL facilitated efficient data querying, and Vue.js was employed for interactive user dashboards.

What was the outcome of the project? The platform was widely adopted by educational institutions, resulting in a 50% increase in operational efficiency and a 40% reduction in administrative overhead. The intuitive interface and powerful analytics features contributed to a significant improvement in student performance.

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** React, Vue.js, JavaScript, HTML, CSS
- **Database:** Oracle, Redis
- **Tools and Services:** AWS, GitLab,

lab experiments. The project aimed to provide a platform for researchers to monitor and analyze biological data in real-time. I led the development of a microservices architecture using Flask and NodeJS for the backend. The frontend was built using React, providing real-time data visualization through interactive charts using Three.js and D3.js. PostgreSQL was used for managing experiment data, and Jupyter Notebooks were integrated for advanced data analysis. We utilized AWS for cloud infrastructure, GitLab for version control, and Google Cloud for scalable storage. Automation Testing was conducted using Cypress, ensuring data integrity and reliability. Redis was used for session management and caching, and GraphQL was integrated to facilitate efficient data queries.

What was the outcome of the project? The platform enabled researchers to monitor experiments in real-time, reducing the time required for data analysis by 50%. It improved the accuracy of experimental results, contributing to a 40% increase in research output.

Tech Stacks:

- **Backend:** Flask, NodeJS
- **Frontend:** React, Three.js, D3.js, JavaScript, HTML, CSS
- **Database:** PostgreSQL, Redis
- **Tools and Services:** AWS, Google Cloud, GitHub, Jupyter Notebooks
- **Other Technologies:** Data Sciences, GraphQL, Automation Testing, Redis

BuildPipeline, OpenVPN, Jira

QuickXi.com

Product owner
InvoZone Apr 29, 2019 - Jan 12, 2024
US-Remote

Project Description: QuickXi is a feature-rich, ready-made solution for e-commerce stores, providing a comprehensive platform for managing online sales, inventory, and customer interactions. The project aimed to offer a scalable and customizable solution for small to medium-sized businesses looking to establish an online presence.

We developed the platform using Laravel and PHP for the backend, with AngularJS and React for the frontend to create a dynamic and responsive user interface. MySQL and MongoDB were used for managing data, while AWS was employed for hosting and cloud services. LAMP stack (Linux, Apache, MySQL and PHP) is the base stack for the project.

Mobile apps for the end consumers are built in React-Native and mobile apps for the store

session management and caching, and GraphQL was used for efficient data querying. Angular 2+ was utilized for interactive dashboards, while automation testing was conducted using Jest and Cypress.

What was the outcome of the project? The platform aimed to reduce response times by 60% and improve lead conversion rates by a minimum of 35%. Businesses reported a significant decrease in support costs and an ample increase in customer satisfaction due to the efficient handling of queries and seamless user experience.

Tech Stacks:

- **Backend:** Elixir, Ruby On Rails
- **Frontend:** Gatsby, React, NextJS, Angular 2+, JavaScript, HTML, CSS
- **Database:** MongoDB, Redis
- **Tools and Services:** AWS, GitLab, Slack, Figma, Jenkins
- **Other Technologies:** AI, Machine Learning, GraphQL, Automation Testing, CI/CD, Jest

managers are built within Native Android using Java and iOS using Swift.

We integrated Webflow for frontend design, Postman for API testing, and Hubspot for CRM integration. Automation Testing was conducted using Jest, and Redis was used for session management. AngularJS was implemented for the administrative dashboards, while GraphQL was used for efficient data querying.

What was the outcome of the project? The platform enabled businesses to launch their online stores within days, resulting in a 50% reduction in setup time and a 30% increase in sales. The integration of advanced features like inventory management and CRM helped businesses streamline their operations, resulting in a 40% improvement in customer engagement.

Tech Stacks:

- **Backend:** PHP, Laravel
- **Frontend:** AngularJS, React, JavaScript, HTML, CSS
- **Mobile:** React-Native, Android, iOS
- **Database:** MySQL, MongoDB, Redis
- **Tools and Services:** AWS, Webflow, Postman, Hubspot

AnakeedMart.com

Chief Technology Officer

InovZone Apr 29, 2019 - Feb 12, 2020

Remote-KSA

Project Description: AnakeedMart is an online grocery delivery platform designed to provide a seamless shopping experience for users. The project aimed to simplify the process of ordering groceries online, with features like live tracking and secure payment options.

I spearheaded the development of the platform using NodeJS and React for backend and frontend services respectively. The mobile app was developed using React Native, providing a cohesive experience across web and mobile platforms. We employed MongoDB for data storage and integrated AWS for cloud services.

Jira was used for project management, and GitLab was employed for version control. Automation Testing was conducted using Jest and Cypress, ensuring high performance and reliability.

What was the outcome of the project? The platform played a pivotal role during COVID and facilitated over 10,000 orders within the first six months, resulting in a 70% increase in user engagement and a 40% reduction in order processing times. Customers appreciated the live tracking feature, contributing to a 50% improvement in satisfaction ratings.

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** React, React Native, JavaScript, HTML, CSS
- **Database:** MongoDB

- **Tools and Services:** AWS, Jira, GitLab
- **Other Technologies:** Automation Testing, Jest

Technical Project Manager at PureLogics

Full-Time - Onsite | Mar 06, 2017 -Apr 26, 2019

- ❖ Planning and executing technical projects from initiation to completion, ensuring adherence to project goals, timelines, and budgets.
- ❖ Collaborating with cross-functional teams, including developers, engineers, designers, and stakeholders, to define project requirements, scope, and deliverables.
- ❖ Creating and maintaining project plans, schedules, and documentation, including project charters, work breakdown structures (WBS), and risk management plans.
- ❖ Managing project resources, including assigning tasks, tracking progress, and resolving issues or conflicts that may arise during project execution.
- ❖ Monitoring and controlling project milestones, budgets, and risks, and taking corrective actions to ensure project success.
- ❖ Facilitating effective communication and collaboration among project team members, stakeholders, and senior management.
- ❖ Conduct regular project status meetings, providing updates, and reporting on project progress, risks, and dependencies.
- ❖ Identifying and managing project risks and issues, implementing appropriate mitigation strategies, and escalating critical issues to higher management when necessary.
- ❖ Ensuring compliance with organizational processes, methodologies, and quality standards throughout the project lifecycle.
- ❖ Continuously evaluate project performance, identify improvement areas, and implement lessons learned for future projects.

Project Description: TravelSighted is a platform for tourists to explore and discover new destinations with personalized recommendations

operational costs. The project addressed the issue of fragmented communication and inefficient load management in the logistics industry.

I led the development of the platform using NodeJS and PHP for backend services, and React and Angular for frontend development. We integrated AWS for hosting and cloud infrastructure, and MySQL served as the primary database. Socket.io was used for real-time communication features like load tracking and carrier updates.

We utilized GitHub for version control, Jira for project management, and Cypress for Automation Testing. React was used for the administrative dashboards, and the LAMP stack was implemented for specific services.

What was the outcome of the project? The platform improved load management efficiency by 30% and reduced operational costs by 25%. It facilitated better communication between carriers and brokers, resulting in a significant increase in user satisfaction and a 50% improvement in load-matching efficiency.

Tech Stacks:

- **Backend:** NodeJS, PHP
- **Frontend:** React, Angular, Vue.js, JavaScript, HTML, CSS
- **Database:** MySQL
- **Tools and Services:** AWS, GitHub, Jira
- **Other Technologies:** Automation Testing, Socket.io

and interactive features. The project aimed to enhance the travel experience by providing curated travel itineraries and local insights.

I led the development using React Native for the mobile application and .NET for backend services. The frontend was built using TypeScript React and Semantic-UI, providing an intuitive user experience. We integrated Azure for hosting and cloud services, and maps APIs for interactive location-based features.

We utilized GitHub for version control, Trello for project management, and Cypress for Automation Testing. Redux-toolkit was implemented for state management. React was used for specific interactive elements, while GraphQL facilitated efficient data querying.

What was the outcome of the project? The platform saw a 45% increase in user engagement and a 30% rise in user retention. The interactive features and personalized recommendations contributed to a 40% improvement in customer satisfaction and a 35% increase in bookings through the platform.

Tech Stacks:

- **Backend:** .NET
- **Frontend:** React, React Native, TypeScript, Semantic-UI, HTML, CSS
- **Database:** MongoDB
- **Tools and Services:** Azure, GitHub, Trello, Cypress

PureLogics Feb 07, 2018 - Apr 26, 2019

US-Remote

Project Description: AcqyrCash is a platform for gamers to convert in-game assets into real-world assets, aimed at enhancing the gaming experience and providing monetization options for players. The project addressed the challenge of asset liquidity in the gaming industry.

I led the development of the platform using NodeJS and Express for backend services, with React Native and Angular for frontend development. We utilized PostgreSQL for database management and AWS for cloud hosting.

GitHub was used for version control, and Jira was employed for project management. We integrated AWS Cognito for secure user authentication, and Cypress was used for Automation Testing. React was utilized for interactive dashboards

What was the outcome of the project? The outcome was a unique platform for gamers to convert their in-game assets into real-world assets. The secure and scalable infrastructure, combined with user-friendly features, facilitated a smooth transaction process, increasing user engagement and providing a novel solution in the gaming industry.

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** React Native, Angular, Vue.js,

UrduPoint.com

Technical Project Lead

PureLogics Mar 10, 2017- Apr 26, 2019

UK-Remote

Project Description: UrduPoint is a comprehensive news application designed to deliver real-time news updates, articles, and videos to users in the Urdu language. The project aimed to provide a user-friendly platform for accessing news content in one's native language.

I led the development of the platform using PHP for backend services and React Native for the mobile application. The frontend was developed using React and Semantic-UI, providing an intuitive user interface. MySQL was used for database management, and AWS was employed for cloud infrastructure.

We integrated Socket.io for real-time news updates. GitHub was used for version control, and Jira for project management. We used Firebase messaging for real-time notifications. We integrated several ad/monetization platforms like Facebook ads and Google Ad Manager

What was the outcome of the project? The development of the mobile app achieved over 500,000 downloads within the first year, resulting in a 56% increase in user engagement and a 40% rise in ad revenue. The platform's real-time news updates and user-friendly interface contributed to a 50% improvement in customer satisfaction.

Tech Stacks:

JavaScript, HTML, CSS

- **Database:** PostgreSQL
- **Tools and Services:** AWS, GitHub, Jira, AWS Cognito
- **Other Technologies:** React Native, AWS Cognito, AWS Lambda, GraphQL, Redis, Automation Testing, Jest

ClubLacrosse.org

Technical Project Lead
PureLogics Mar 10, 2017- Feb 07, 2018
US-Remote

Project Description: ClubLax is the official sports app for the sports club lacrosse, providing players and fans with real-time game statistics, player profiles, and live updates. The project aimed to enhance fan engagement and provide a platform for tracking game performance.

I led the development of the platform using NodeJS and Express for backend services and React Native for the mobile application. The frontend was built using React and Semantic-UI, providing an engaging user experience. AWS was employed for hosting and cloud services, and MongoDB served as the primary database.

We integrated Socket.io for real-time updates, and AWS Cognito for secure authentication. GitHub was used for version control, and Jira for project management. Redis was used for session management. React was utilized for interactive features like live game tracking and player statistics.

- **Backend:** PHP
- **Frontend:** React, React Native, JavaScript, HTML, CSS
- **Database:** MySQL
- **Tools and Services:** AWS, GitHub, Jira
- **Other Technologies:** Socket.io, Firebase, Firebase-admob, Google Ad Manager, Facebook Ad Manager

NextHire.in: Get noticed by the employers, the employers will message you for hiring

Technical Project Lead
PureLogics Mar 10, 2017- Jul 11, 2017
US-Remote

Project Description: NextHire is a recruitment platform designed to connect job seekers with potential employers, offering features like job matching, candidate profiles, and interview scheduling. The project aimed to streamline the hiring process and improve candidate visibility.

I led the development using JavaScript, NodeJS, and Express for backend services and Angular for frontend development. MongoDB was used for managing candidate and job data, while AWS was employed for hosting and cloud services. GitHub was used for version control, and Postman was employed for API testing. We integrated AWS Cognito for secure authentication. AngularJS was utilized for interactive dashboards and job analytics.

What was the outcome of the project? NextHire emerged as an efficient hiring solution that made the job search and recruitment process more

What was the outcome of the project? The outcome of ClubLax was highly positive, as it provided users with an enhanced platform for real-time statistics, player performance data, and game insights for lacrosse clubs. The platform improved the engagement of sports teams with their supporters by offering easy access to live updates, game statistics, and performance data. The app also fostered a greater sense of community among players and fans, making it a central hub for lacrosse teams.

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** React, React Native, Vue.js, JavaScript, HTML, CSS
- **Database:** MongoDB
- **Tools and Services:** AWS, GitHub, Jira, AWS Cognito
- **Other Technologies:** Socket.io, Redis, Jest

streamlined and dynamic. By giving candidates the opportunity to connect directly with potential employers through the platform, NextHire bridged the gap between recruiters and job seekers. This innovative approach helped reduce the time it took for candidates to get noticed by employers, creating a more interactive and faster recruitment cycle.

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** Angular, JavaScript, HTML, CSS
- **Database:** MongoDB
- **Tools and Services:** AWS, GitHub, Postman, AWS Cognito
- **Other Technologies:** Jest

Senior Software Engineer at ARBISOFT

Full-time - Onsite | Feb 10, 2014 - Mar 02, 2017

- Designing, coding, testing, and debugging complex software applications and systems.
- Leading and participating in architectural design discussions and providing technical expertise and guidance to the development team.
- Collaborating with cross-functional teams, including product managers, designers, and other engineers, to gather requirements and deliver high-quality software solutions.
- Mentoring and coaching junior developers, providing code reviews, and promoting best practices and coding standards.
- Analyzing and optimizing software performance, identifying and resolving bottlenecks, and ensuring scalability and efficiency.
- Conducting thorough testing and verification of software functionality and performance to ensure high-quality and bug-free code.
- Investigating and resolving software defects and issues, and implementing appropriate fixes and enhancements.

Project Highlights

RemindMeLater.io

Senior Software Engineer
arbisoft Jul 05, 2016- Mar 02, 2017
Pakistan-Onsite

Project Description: RemindMeLater is an online shopping assistant that allows users to save items for later purchases and receive notifications when items are back in stock or on sale. The project aimed to enhance the online shopping experience by helping users track their favorite products.

I led the development of the platform using .NET for backend services and React Native for the mobile application. The frontend was developed using React and Semantic-UI, providing an intuitive and engaging user interface. We integrated Azure for hosting and cloud services, and PostgreSQL was used for database management.

GitHub was employed for version control, and Microsoft Boards for project management. React was utilized for interactive features like product tracking and notifications, while GraphQL was used for efficient data querying.

What was the outcome of the project? The launch of RemindMeLater revolutionized the way users managed their online shopping. With a simple interface that allowed users to save items they liked and set reminders, the app offered a solution to impulsive shopping while ensuring customers didn't miss out on products they were genuinely interested in. The app's efficiency in reminding users of their potential purchases significantly enhanced their shopping experience,

Convoy.com

Senior Software Engineer
arbisoft Mar 02, 2016- Mar 02 2017
US-Remote

Project Description: Convoy is a smart freight network aimed at reducing carbon emissions by optimizing load management and reducing empty miles. The project focused on creating a platform that connects shippers and carriers for efficient freight management.

I led the development of the platform using NodeJS and Express for backend services and React for frontend development. The frontend was built using Semantic-UI and Material-UI, providing an intuitive user experience. AWS was employed for cloud services, and MongoDB served as the primary database.

We integrated Socket.io for real-time updates, and Redis for session management and Vue.js was utilized for interactive dashboards.

What was the outcome of the project? The outcome of Convoy was impactful in the logistics and freight network industry, offering a smarter, more eco-friendly way for freight services to reduce carbon emissions. With its comprehensive freight management system, Convoy empowered logistics companies to optimize their supply chains and connect with brokers, ultimately helping reduce empty truck miles. It helped create more efficient routes and reduced the overall environmental footprint of transportation.

driving higher engagement and user satisfaction.

Tech Stacks:

- **Backend:** .NET
- **Frontend:** React, React Native, JavaScript, HTML, CSS
- **Database:** PostgreSQL
- **Tools and Services:** Azure, GitHub, Microsoft Boards
- **Other Technologies:** React Native, GraphQL, Swagger

Amz2go.com

Software Engineer
arbisoft Jul 07, 2015- Mar 02, 2016
US-Remote

Project Description: Amz2go is a platform designed for trading purposes, providing users with tools to manage and track their trading activities. The project aimed to offer a comprehensive solution for traders to monitor their portfolios and execute trades efficiently.

I led the development using NodeJS and Express for backend services and Java for Android and Objective-C was used for iOS for the mobile application. The frontend was developed using React and Semantic-UI, providing an intuitive user interface. AWS was employed for hosting and cloud services, and Django was used for specific backend features.

We integrated Bitbucket for version control and Jira for project management. React was utilized for interactive features like real-time trading updates

Tech Stacks:

- **Backend:** NodeJS, Express
- **Frontend:** React, Vue.js, JavaScript, HTML, CSS
- **Database:** MongoDB, Redis
- **Tools and Services:** AWS, GitHub, Jira
- **Other Technologies:** Socket.io

EzyMigrate.co.nz

Software Engineer
arbisoft Feb 10, 2014- Jul 07, 2015
Newzealand-Remote

Project Description: EzyMigrate is an immigration advisory platform designed to help businesses manage their client interactions, documents, and processes. The project aimed to streamline the immigration advisory process and improve client management.

I led the development using .NET for backend services and React for frontend development. We integrated Azure for hosting and cloud services, and PostgreSQL was used for database management. The frontend was developed using Semantic-UI and Material-UI, providing an intuitive user experience.

We utilized GitHub for version control, and Trello for project management.

and portfolio tracking.

What was the outcome of the project? The platform provided by Amz2go for trade and e-commerce purposes saw great adoption due to its seamless interface and user-friendly features. It allowed businesses to efficiently manage their trade operations, create stronger links with vendors, and maintain customer satisfaction through well-organized workflows. The app's success was largely due to its intuitive system for managing product listings and transactions.

Tech Stacks:

- **Backend:** NodeJS, Django
- **Frontend:** React, Vue.js, JavaScript, HTML, CSS
- **Mobile:** Android (Java), iOS (Objective-C)
- **Database:** MongoDB
- **Tools and Services:** AWS, Bitbucket, Jira
- **Other Technologies:** Amazon API Gateway

What was the outcome of the project? The introduction of EzyMigrate had a significant impact on immigration consultants and advisors. The software made the entire process of handling immigration cases smoother and more efficient. By providing an all-in-one platform for managing client information, applications, and compliance requirements, EzyMigrate simplified the workload for advisors and increased operational efficiency, leading to improved client outcomes.

Tech Stacks:

- **Backend:** .NET
- **Frontend:** React, JavaScript, HTML, CSS
- **Database:** PostgreSQL
- **Tools and Services:** Azure, GitHub, Trello
- **Other Technologies:** YouTube Video Integration

Junior Software Engineer at ORM Digital Solutions

Full-time - Onsite | Jun 04, 2012 - February 07, 2014

- Assisting in the design, development, testing, and debugging of software applications.
- Collaborating with senior engineers and other team members to gather requirements and contribute to the software development process.
- Writing clean, efficient, and well-documented code following established coding standards and best practices.
- Participating in code reviews to ensure code quality, readability, and maintainability.
- Conducting unit testing and assisting in the identification and resolution of software defects.
- Assisting in the implementation of software enhancements and new features.

Project Description: REIStar is a real estate platform designed to simplify property buying and selling processes by providing tools for listing management, property searches, and secure transactions. The project aimed to enhance the real estate experience for both buyers and sellers.

We developed the platform using Laravel and PHP for backend services and HTML, CSS, jQuery and Bootstrap for frontend development. MySQL was used for database management, and AWS was employed for cloud infrastructure.

We integrated GitHub for version control, and Jira for project management.

What was the outcome of the project? REIStar successfully enhanced the way property transactions were conducted. By offering a digital platform where buyers and sellers could connect seamlessly, the platform streamlined the entire process of buying and selling real estate. Its user-friendly interface and comprehensive features made it easier for users to list, search, and close property deals.

Tech Stacks:

- **Backend:** Laravel, PHP
- **Frontend:** JavaScript, HTML, CSS, jQuery, Bootstrap
- **Database:** MySQL
- **Tools and Services:** AWS, GitHub, Jira
- **Other Technologies:** Google Maps

NewZealand-Remote

Project Description: Avatar is an SEO service platform designed to help businesses improve their online presence through search engine optimization. The project aimed to provide comprehensive SEO tools and services for businesses looking to enhance their visibility.

I assisted in the development of the platform using Laravel and PHP for backend services and HTML CS and Jquery for frontend development. MySQL was used for database management, and AWS was employed for cloud infrastructure.

We integrated GitHub for version control, and Trello for project management.

What was the outcome of the project? Avatar became an essential tool for businesses seeking to improve their online presence through SEO services. By optimizing websites for search engines, Avatar enabled companies to reach a larger audience and improve their visibility in a competitive online marketplace.

Tech Stacks:

- **Backend:** Laravel, PHP
- **Frontend:** JavaScript, HTML, CSS, jQuery
- **Database:** MySQL
- **Tools and Services:** AWS, GitHub, Trello
- **Other Technologies:** Google Adwords

Achievements

- Highest achievement award on first ever in Computer Science Department to score 4 out of 4 GPA in a semester - Lahore Garrison University (Jun/2018)
- Gold medal 3rd Convocation - Lahore Garrison University (Sep/2019)
- Employee of the Year presented by InvoZone-20 (Mar/2020)
- Honorary guest to brief on latest trends in IT - Riyadh Chamber of Commerce KSA-22 (Feb/2022)
- Tech Exhibitor at LEAP-22 Riyadh (Feb/2022)
- Tech Exhibitor at MWC-22 Barcelona (Mar/2022)
- Top IT Voice - Youth Representative Pakistan at Mobile World Congress (MWC) Barcelona-22 (Mar/2022)
- Speaker Marriage of IT and environmental sciences at Oslo Innovation Week-22 (Sep/2022)
- Tech Exhibitor at Web Summit Lisbon-22 (Nov/2022)
- Member official Tech Delegation to UK by Federation of Pakistan Chambers of Commerce & Industry (FPCCI) (Nov/2022)
- Speaker at Deep Dive into Freelancing business conference by Google developer student clubs-23 (Jun/2023)
- Panel Speaker at Tech Summit-23 Powered by PNY Trainings-23 (Jun/2023)
- Top Tech Champion Award by PNY Conference (Jan/2024)

Confidential Project

A telegram bot focused on cryptocurrency price updates for its subscribed users. It collects coins' data using API and sends alerts to all the users (who are tracking the specific coin) on price changes in a specific time period (1 day, 2 days, last week, last month, last year, last 2 years, all time). Users can also track newly added coins to the crypto market. Worked on alerts for new durations, listening, and alerts for new coins.

Elixir, PostgreSQL

Voluntary Work

Data Scientist and Cyber Security Professional at DFRSC

Part-time - Onsite | Mar 01, 2018 - Feb 22, 2019

- Analyzing and interpreting complex data sets using statistical techniques and machine learning algorithms to derive actionable insights and solve business problems.
- Designing and developing predictive models, algorithms, and data-driven solutions to address specific business challenges.
- Collecting, cleaning, and preprocessing data from various sources to ensure data quality and reliability.
- Collaborating with cross-functional teams to identify data-driven opportunities and provide data-driven recommendations for business decisions.
- Developing and implementing data visualizations and dashboards to effectively communicate findings to stakeholders.
- Conducting security awareness training and promoting a culture of security among employees.
- Collaborating with IT teams and vendors to implement and maintain security technologies and solutions.
- Keeping up to date with the latest cyber threats, attack vectors, and security technologies, and proactively implementing measures to mitigate risks.

- Participating in incident response activities, including investigating security incidents, conducting forensic analysis, and implementing remediation measures.
- Providing guidance and expertise on security best practices, compliance requirements, and regulatory frameworks to stakeholders.

Homoeo Pharmacist Assist at Karachi Pharmacy

Part-time - Onsite | May 25, 2009 - Aug 14, 2010

- Assisted senior homeopathic pharmacists in the preparation of homeopathic medicines, following precise formulation and dilution processes.
- Involved in the packaging and labeling of homeopathic medicines, ensuring accuracy and compliance with standards.
- Helped maintain an organized inventory of raw materials and finished products, ensuring efficient stock management.
- Assisted in quality control checks to ensure that medicines met the required standards and specifications.
- Supported senior pharmacists during patient consultations by preparing recommended remedies and documenting treatment plans.
